R Notes

Introduction & Concepts

Creating, listing and deleting objects in memory

Creating an object with the "assign" operator: **<- / ->**

ls(): lists the object in memory

```r
name <- "Carmen"; n1 <- 10; n2 <- 100; m <- 0.5
ls()
```

```
## [1] "m"     "n1"    "n2"    "name"
```

pat = : (pattern) lists only the objects which contain a given character

```r
ls(pat = "m")
```

```
## [1] "m"     "name"
```

To restrict the list whose name STARTS with the character

```r
ls(pat = "^m")
```

```
## [1] "m"
```
